⊗ Xi intercept™

Data Intercept Solution

Keeps sensitive cardholder data from entering your internal systems and dramatically reduces PCI scope and costs, allowing you to remain secure and achieve full PCI compliance.

If your organization handles, processes or stores sensitive cardholder data, you are required to comply with the Payment Card Industry Data Security Standards (PCC DSS). And with data breaches and fraudulent activity continuing to rise, companies that store cardholder data onsite are particularly vulnerable, even with encryption.

> **The average cost of a data breach to a company is $3.5 million in U.S. dollars and a 15% increase over costs last year.[1]**

XiIntercept™ captures card numbers as early in the workflow as possible. The solution leverages Paymetric's award-winning XiSecure® On-demand tokenization technology and ensures that cardholder data never enters enterprise systems such as:
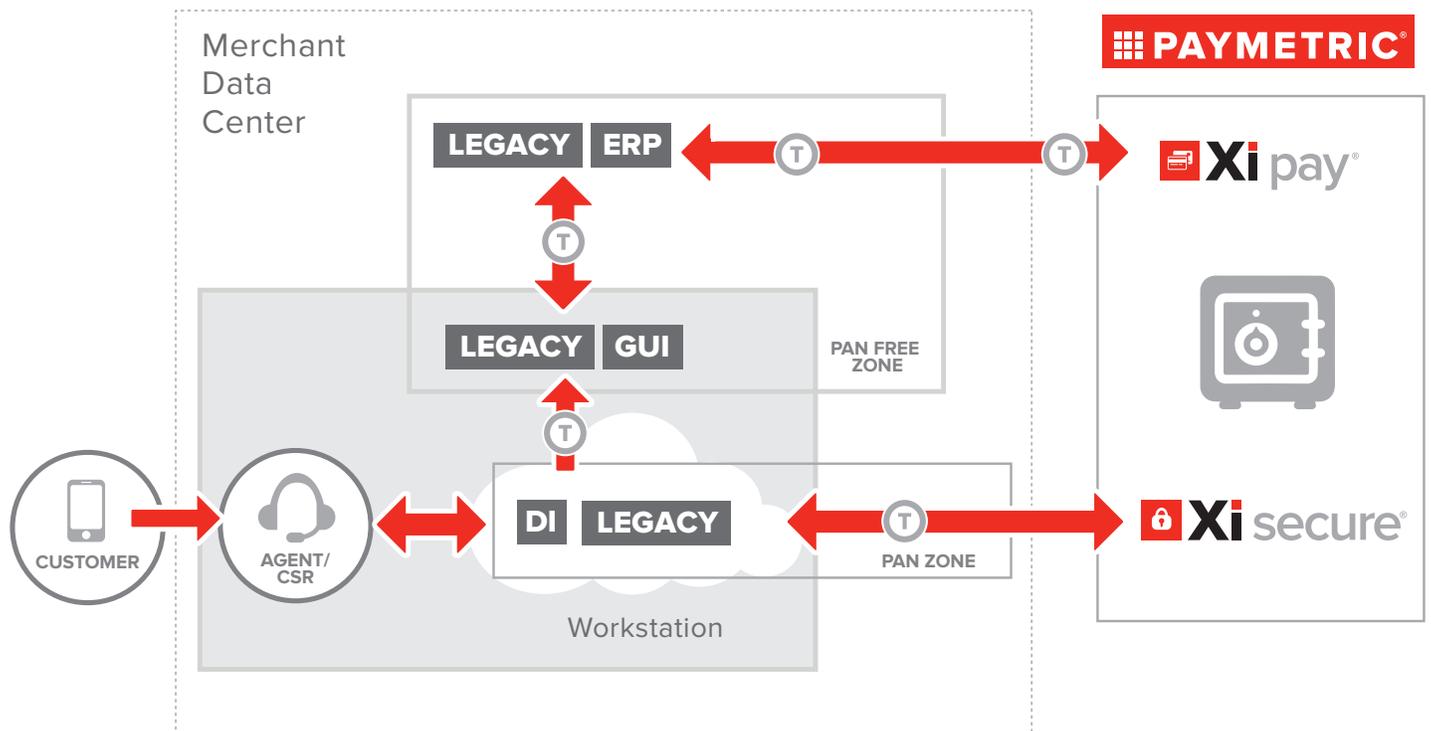

- SAP®
- ERP
- CRM
- Legacy applications
- eCommerce

You no longer store cardholder data onsite, but instead store tokens, eliminating the liability of protecting that sensitive card information and the associated risk of doing so.

Benefits

- Replaces credit card numbers with tokens, rendering the data useless to thieves
- Reduces the risk and cost associated with a data breach
- Provides log information for PCI audit compliance purposes
- Easily distributes across an environment with multiple systems
- Reduces scope and cost of achieving PCI compliance
- May qualify merchant for Self Assessment Questionnaire C (SAQ-C), reducing the number of compliance questions from 326 to 139
