Secure File Transfer

Mitigates risk and simplifies the transfer of files containing sensitive information within your enterprise or with trusted partners.

When transferring files with sensitive information between internal departments or with external trusted partners, it is essential to secure that information. In the past, the only way to do this was to receive these files in a perimeter network, contact a provider such as Paymetric to tokenize the sensitive information and then forward the files with the tokenized data to the desired location.

Unfortunately, holding critical, unsecured information – even for a brief time – exposes your company to significant risk, increases your PCI compliance burdens and requires additional time and money to maintain the electronic interfaces with partners and internal business units.

The XiTransfer™ Secure File Transfer service is a highly sophisticated service designed to efficiently handle files containing a variety of sensitive data, which can be shared or exchanged with internal or external parties. It is ideal for:

- Transferring files that include credit card numbers, Social Security numbers, bank account numbers, patient medical records or similar types of information
- Leveraging Paymetric's XiFlex™, a format-preserving tokenization solution, to match the format and length requirements of existing data
- Storing all sensitive, encrypted data in Paymetric's highly secure tokenization vault
- Implementing a cost-effective, cloud-based solution that requires no large capital investment

How Can It Be Applied?

Paymetric's XiTransfer service can be applied throughout today's business world:
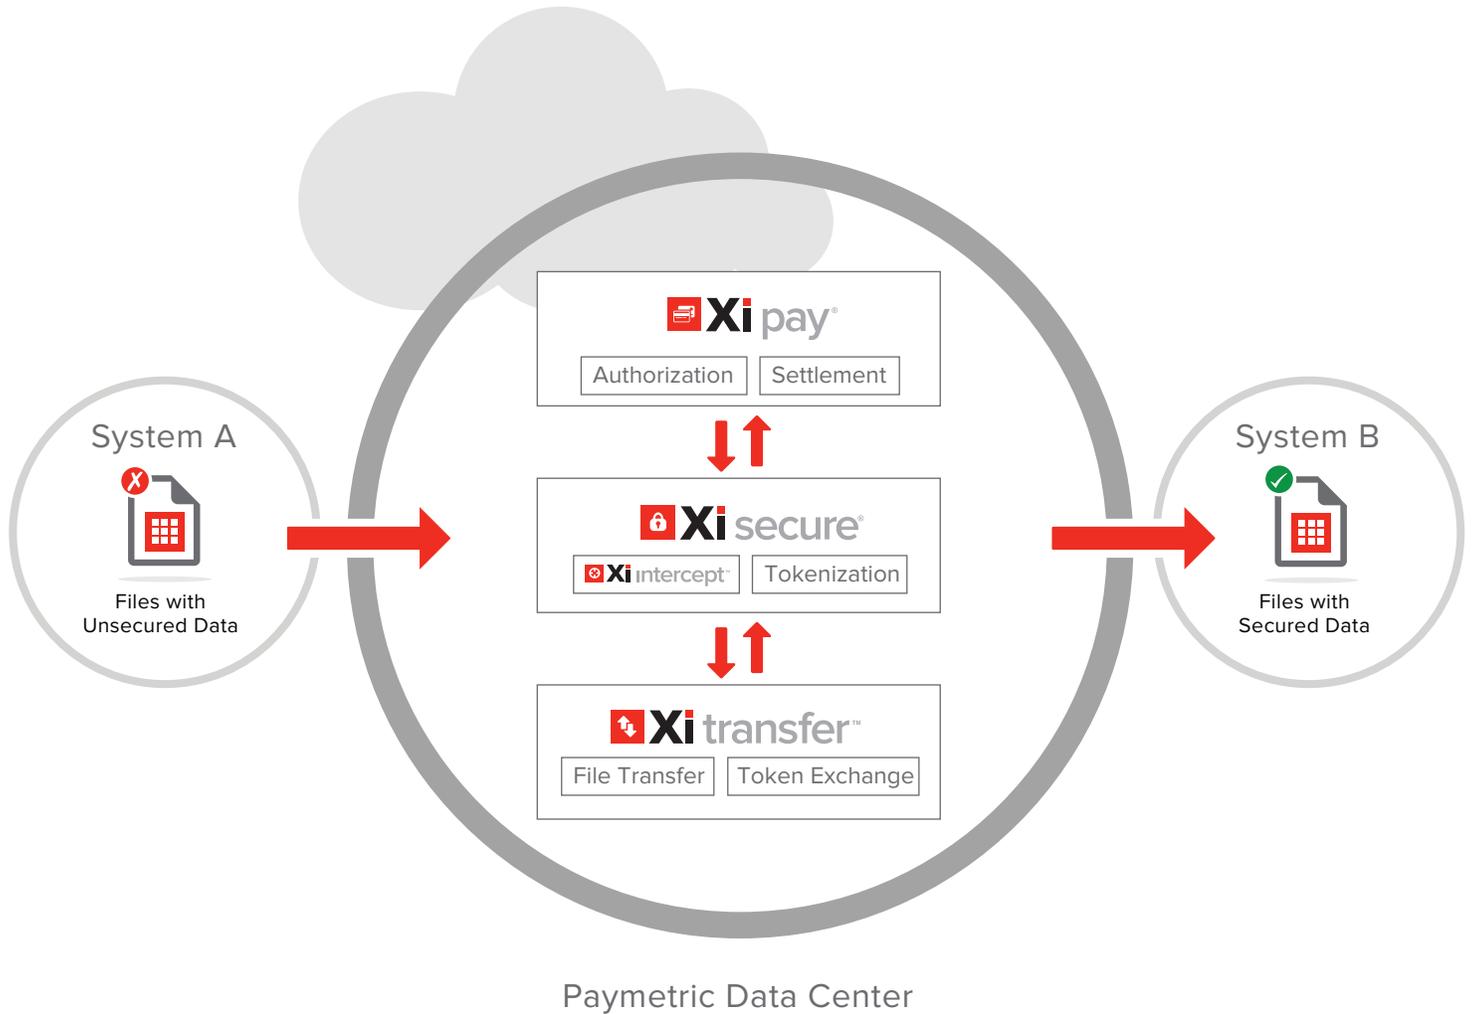

- Travel and Expense Management solutions
    - SAP® On-premise Travel Management Solution
    - SAP Cloud for Travel and Expense Management
- Healthcare industry file sharing
- Insurance and utility company programs
    - SAP IS-Insurance solution
    - SAP IS-Utilities solution

Benefits

- Improve your protection of personal identifiers and other sensitive customer information
- Significantly reduce your exposure to data breaches and fraud
- Lessen PCI scope and cost
- Deliver a highly affordable, cloud-based solution
